Grow a Landscape Favorite Again with NEW Beacon® Impatiens!

BEACON®

IMPATIENS

from PanAmerican Seed®

GROWS STRONGER, SHINES LONGER

***Impatiens walleriana* is back in the shade without the risk of disease!**

Extensive trialing has proven that Beacon Impatiens provides genetic high resistance to Impatiens downy mildew – eliminating the need for costly mid-season replacements.

Plus, they can be grown like you used to grow Impatiens, without any fungicides or special care regimens.

For fast-filling, season-long color in the landscape, you can count on Beacon Impatiens to thrive!

TOP TIPS FOR LANDSCAPE PLANTING SUCCESS

Plant “fresh”

- Work on a plan with your grower for realistic timing on pre-season delivery
- Note that root bound plants suffer more transplant shock (depending on the species)

Know your soil – pH & Salts

- Strive for greater air porosity – you’ll want more air than water!
 - Organic matter increases air porosity
- Soil pH, or how tight nutrients hold to soil (pH “range”)
 - Less than 6.0 = Nutrients leached = Small leaves, marginal chlorosis
 - Greater than 7.5 = Nutrients bound tight = Young leaf chlorosis, stunting
- Low EC: Causes small, weak plants
- High EC: Causes marginal necrosis (brown edges) and stunted plants

Watering – 50% of landscape water is wasted

- More plants die due to overwatering than to under watering
- Reduce water as plants fill in the beds
- When leaves touch, they’ve had enough!

Fertilization – 3 elements to promote plant health and growth

- N (nitrogen): “Gas” to grow
- P (phosphorus): Stem stretch, roots and flowering
- K (potassium): “Tone”, how rigid the plant is

Plant for success – Avoid soil compaction!

- Small beds
 - Cultivate the soil before planting
 - When possible, work from perimeter – stay out of the bed
 - Avoid “knee blight” – kneeling compacts the soil
- Large beds
 - Cultivate from the center out and plant as you go, cultivate the edge and plant as you go or work from one side to the other
- Moisture content of plant tray soil should match the moisture content of the destination bed soil
- Match crown of plant to the soil level (like you would a tree!)
