***Impatiens walleriana* is back in the shade without the risk of disease!**

Extensive trialing has proven that Beacon Impatiens provides genetic high resistance to Impatiens downy mildew – eliminating the need for costly mid-season replacements.

Beacon is not immune to IDM; there are scenarios where preventative IDM fungicides may be recommended.

For fast-filling, season-long color

in the landscape, you can count on Beacon Impatiens to thrive!

BEACON VS. OTHER IMPATIENS

NORTH TO SOUTH, EAST TO WEST, BEACON WORKS!

TOP TIPS FOR LANDSCAPE PLANTING SUCCESS

Plant “fresh”

- Work on a plan with your grower for realistic timing on pre-season delivery
- Note that root-bound plants suffer more transplant shock (depending on the species)

Know your soil – pH & salts

- Strive for greater air porosity – you’ll want more air than water!
 - Organic matter increases air porosity
- Soil pH, or how tight nutrients hold to soil (pH “range”)
 - Less than 6.0 = Nutrients leached = Small leaves, marginal chlorosis
 - Greater than 7.5 = Nutrients bound tight = Young leaf chlorosis, stunting
- Low EC: Causes small, weak plants
- High EC: Causes marginal necrosis (brown edges) and stunted plants

Watering – 50% of landscape water is wasted

- More plants die due to overwatering than to underwatering
- Reduce water as plants fill in the beds
- When leaves touch, they’ve had enough!

Fertilization – 3 elements to promote plant health and growth

- N (nitrogen): “Gas” to grow
- P (phosphorus): Stem stretch, roots and flowering
- K (potassium): “Tone”, how rigid the plant is

Plant for success – Avoid soil compaction!

- Small beds
 - Cultivate the soil before planting
 - When possible, work from perimeter – stay out of the bed
 - Avoid “knee blight” – kneeling compacts the soil
- Large beds
 - Cultivate from the center out and plant as you go; cultivate the edge and plant as you go or work from one side to the other
- Moisture content of plant tray soil should match the moisture content of the destination bed soil
- Match crown of plant to the soil level (like you would a tree!)
